

- The classes should be contained in a package called **practice**
- The constructor of *Believer* should be passed in the instance of *Pray* and *Religion*, *Believer* should delegate methods from these two class as well.
- Each subclass of *Believer* should have a no parameter constructor and use the super class's constructor.
- In the `showBelieve` method in the subclass of *Believer*, you should call `show()` and `pray()` sequentially.
- (optional) In your runner class use factory to randomly generate different religion human, and show the different.
